

Setting targets for antibiotic use for ARIs in general practice

Chris Del Mar cdelmar@bond.edu.au

+61 7 559 52504

Why do we need national targets?

- long-term strategies need them
- especially important for
 - multipronged approaches
 - multiple jurisdictions (health; agriculture etc)

What national targets?

1. National community **antibiotic resistance** rates

GAPS study

Uses:

targets

- ✓ a national
- ✓ regional targets? Eg PHNs?

clinical use

- ✓ antiobiogram?

What national targets?

1. National community antibiotic resistance rates

2. Primary care antibiotic prescribing rates

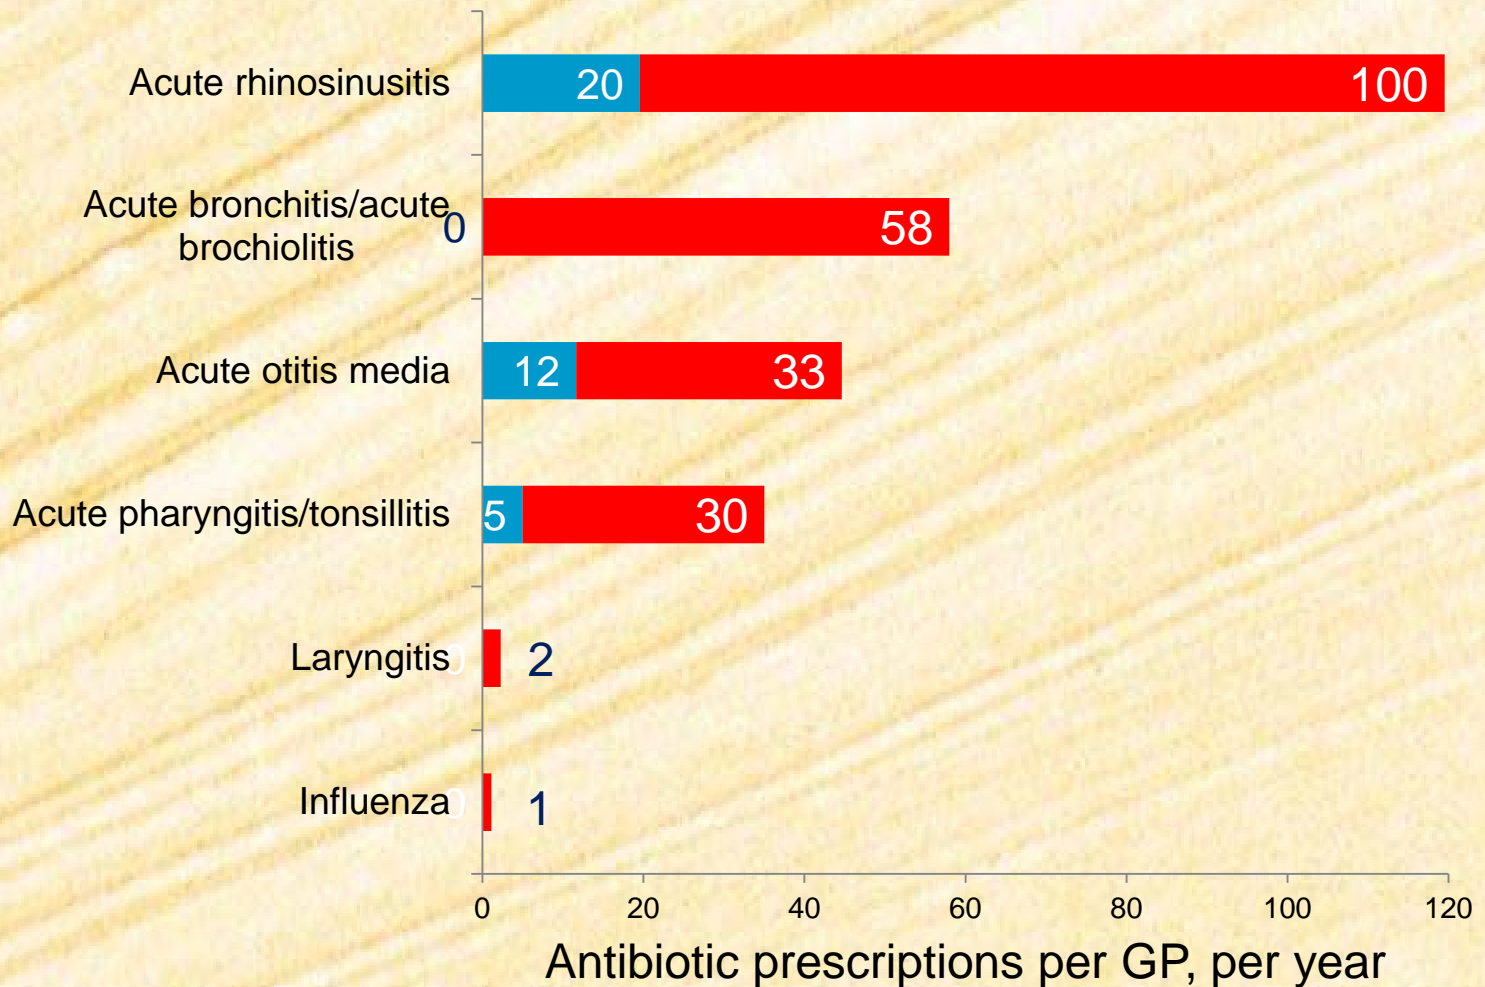

3. National community infectious complications of ARIs

eg mastoiditis; meningitis; pneumonia

2. Primary care antibiotic prescribing rates

new cases managed with antibiotic, millions, Australia / year

total new cases of ARI / year

guidelines recommend
antibiotics

44

currently managed
with antibiotics

230

per GP

1m

6m

Nationally

Where to from here?

national targets

adapted for local targets? eg

- PHNs
- individual practices
