

# Community pharmacist referral to general practice

## Unexplored territory in reducing antibiotic resistance

An invitation for Community Pharmacists and  
General Practitioners

We are interested in how often pharmacists refer patients for medical  
review for suspected infections

Be part of uncovering new avenues for decreasing  
antibiotic use and reducing antibiotic resistance

\* **Minimal time commitment**

\* **Data collection less than 5-15 seconds per patient**

### **What if I want to enrol or know more about the study?**

If you are interested in participating in this study and you are a **registered pharmacist in Australia working in a community pharmacy or a general practitioner in primary health care and practice in Australia**, please click the link to view the participant information sheet and access the data collection form: [ <http://www.pharmacist-referral-study.net/> ]

### **Who is conducting this study?**

This trial is being conducted by the Institute for Evidence-Based Health Care and Faculty of Health Sciences and Medicine at Bond University (Dr Paulina Stehlik; Associate Professor Mark Morgan, and Professor Chris Del Mar), The University of Sydney Pharmacy School (Associate Professor Rebekah Moles) and Ramsay Health Care (Mr Ian Fredericks) and is being funded by a Bond University HSM ECR Seed Grant.
